

Ensure the project records you're obligated to keep stay useable and retrievable for 20, 50, even 100 years

Construction records don't disappear when projects close — and neither do your obligations to retain them. Projects accumulate records with long-term retention obligations from concept design to decommissioning, spread across business applications, collaboration platforms, file and cloud storage, and legacy archives. None of those systems are built to keep records useable for a 10, 20, 50 or 100+ year horizon. Preservica closes that gap: one digital preservation archive that keeps every file governed, readable, and retrievable at a single predictable cost.

Cut cost

Cut the cost of long-term records you're obligated to keep

Find fast

Easily find trusted records when claims and audits arrive years later

Stay readable

Keep files useable for decades, even after the source system is gone

AI-ready

Turn decades of project records into trusted data AI can use

How a leading US engineering, architecture, and construction firm cut long-term storage costs across 11 business units

11

Business units consolidated under a single preservation infrastructure

15+ years

Of project data preserved in a format-safe, auditable, legally defensible state

Single query

Replaces multi-system search across business apps and file shares

One preservation archive that keeps pace with technology — so you don't have to

Platforms holding your records by default, not by design

- Built for active work, not decades of records obligations
- Data fragmented with no unified search or access model
- Licensing and storage costs escalate with every closed project
- Legacy CAD, BIM, and video formats become unreadable over time
- Ungoverned data blocks AI use and creates defensibility gaps

One digital preservation archive for all your long-term data

- Centralised archive protecting long-term data from any source system
- Retention costs controlled across the full obligation horizon
- Records automatically kept readable and legally producible as formats change
- Control which long-term data AI can access — without exposing sensitive records
- Built into Microsoft 365: search, retrieve, and govern in familiar tools

From storage liability to operational asset: what preservation looks like in practice

Cut the cost and burden of retention — without losing access

Inactive project data in CDEs, file shares, and operational platforms drives escalating storage costs and licence sprawl. Consolidate it all in one preservation archive, free live systems for active projects, enable clean platform decommissioning, and keep everything structured and AI-ready.

Make archived records accessible to every team, wherever they work

Engineers retrieving as-built drawings, legal teams responding to a claim, compliance managers fulfilling an audit — all need records on demand, without a support ticket. Preservica delivers consistent search and retrieval through SharePoint via Preserve365, dedicated web portals, or directly in Preservica, with consistent access governance throughout.

Mitigate liability risk. Preserve authenticity independently of the source system

A record is only useful if you can open it, trust it, and prove it hasn't changed. Preservica ensures defensible deletion, prevents critical data loss in support of litigation, and guarantees authenticity through an unbreakable metadata bond and complete audit trail — so the record you retrieve twenty years after handover is the record that was archived.

CUSTOMER STORY

Leading US construction company: preserving project files and reducing storage costs while maintaining access

CHALLENGE

- 50+ departments creating long-term MP4, CAD, and BIM records
- Daily video surveys growing SharePoint storage exponentially
- Teams archive files but must retain access

SOLUTION

- Preserve365 embedded in SharePoint
- Records transferred to a central archive in three clicks
- Readability and integrity maintained for the full retention period

OUTCOMES

- SharePoint storage optimised
- Self-service search and retrieval for business users
- Record-level provenance supporting litigation defence and audit

The Active Digital Preservation™ advantage

OAIS v3, ISO 14721-aligned archiving that keeps your data trusted, always useable, and a seamless part of your Microsoft 365 experience.

Trusted data integrity

An intelligent data model manages every element of an asset as one unbreakable entity — for compliance and AI.

Always readable

Automated ongoing format updates keep records current and immediately available, at scale.

Seamless workflows

Embedded within the Microsoft 365 experience and everyday information governance.

AI on trusted data

Long-term data optimised for the safe and scalable use of AI.
